

PMM + V4S

SFDO Community Sprint - October 2021

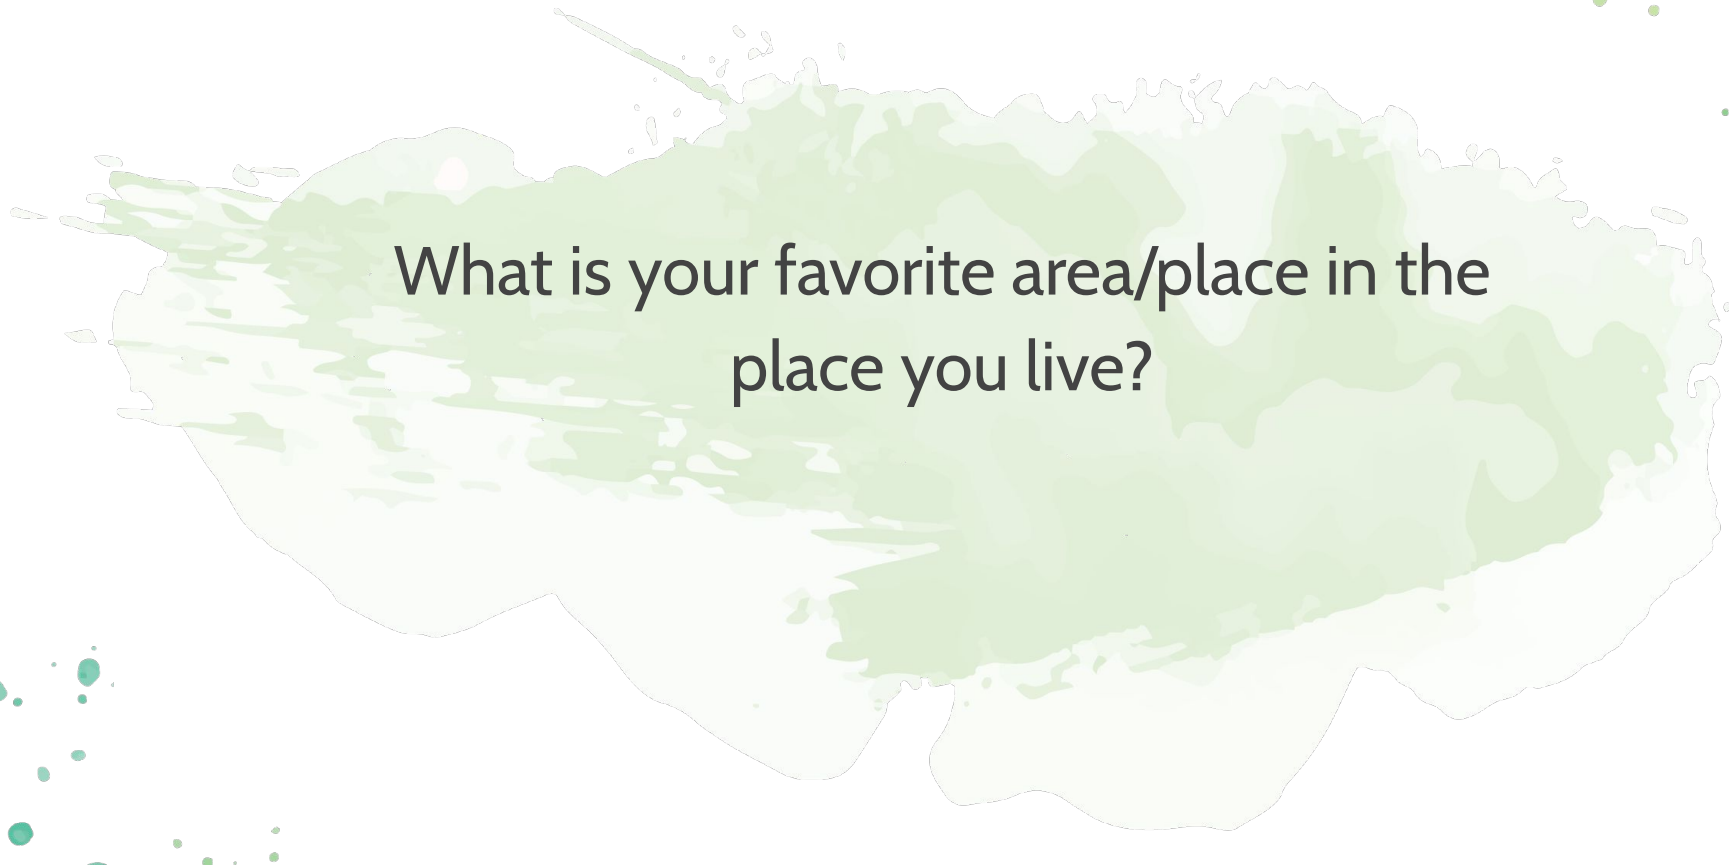

Meet your project leadership team

Deanne Walters
Manager, Salesforce
Communities at New
Leaders

Icebreaker!

**What is your favorite area/place in the
place you live?**

The problem(s)

Nonprofits are unsure if they should use PMM or V4S.

Nonprofits who are using both PMM and V4S want to know the best way to integrate them.

What We Have Done

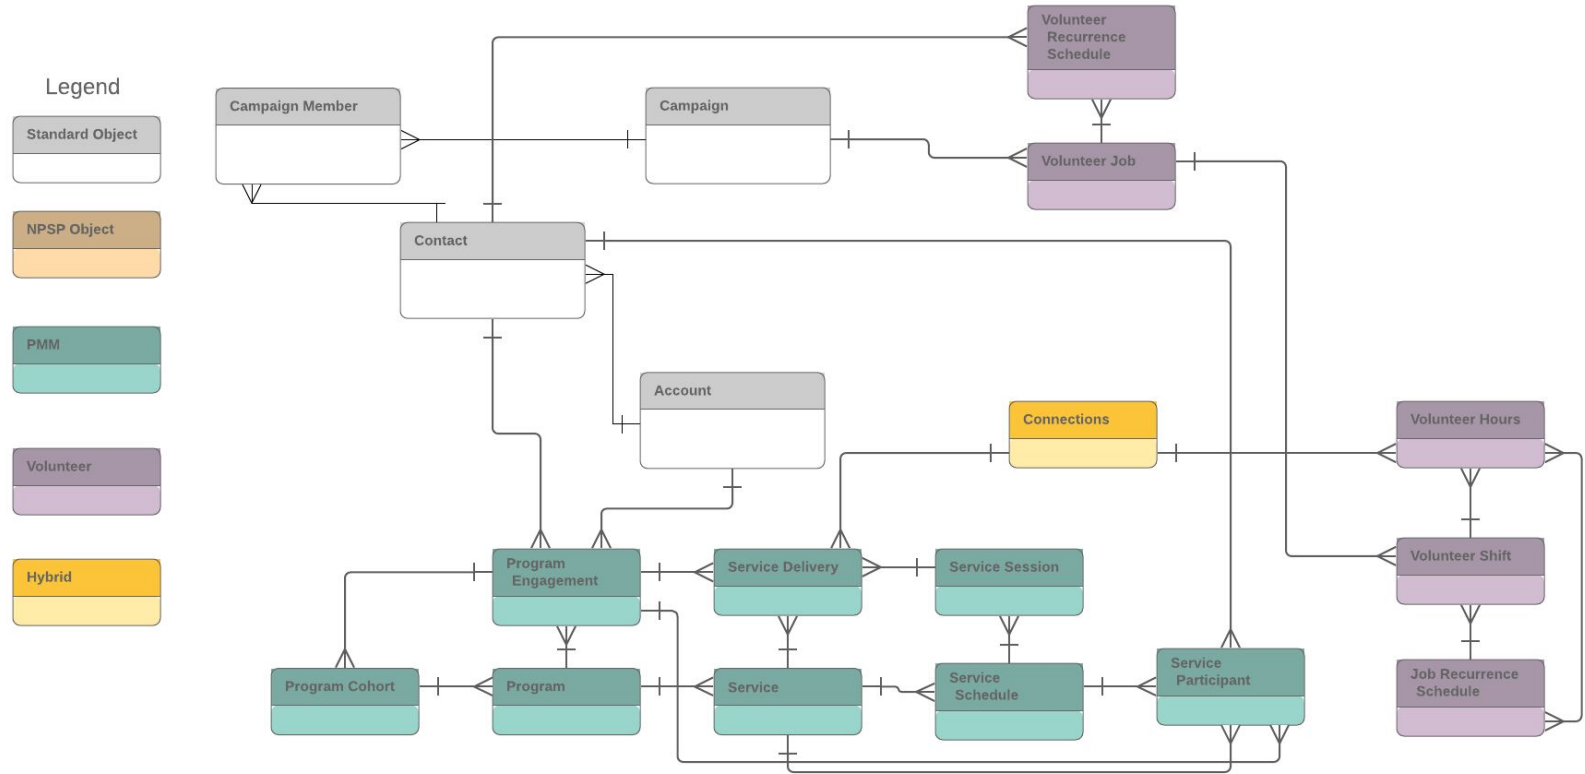

1. V4S and PMM Comparison information - comparing features and limitations of each
2. Created PMM v. V4S Infographic
3. Created user stories
4. Created Flow with Connections objects to connect Volunteer Hours and Service Delivery V1.0 (in GitHub and documentation)
5. Got onto Metecho!
6. Realized we wanted to connect Volunteer Hours and Service Deliveries via junction object and deprecated version V1.0

When to Use PMM & V4S

Recommend PMM if:	Recommend V4S if:
Manage multiple Programs and Services and track impact and outcome	Need online volunteer signup
One to one Mentor/Mentee tracking	Need volunteer personal page
Support group tracking	Need ability for volunteer skill search
Need program management	Need volunteer shift/session reminders
Connect volunteer to a specific service delivery	Need schedule matching
Need simple volunteer tracking	Need volunteer and job recurrence schedules

Proposed Hybrid Solution ERD

Ideas on What We Want to Do Next

1. Refocus the team goals (What do we want to achieve?, How do we know we have it?)

Possibilities for continuing previous work:

2. Moving documentation into GitHub webpage (like the Data Gen Team)
3. Finish the Flow to connect the Volunteer Hours and Service Deliveries via junction object

Description

A Community Sprint project group to draft a recipe doc to connect Program Module (PMM) and Volunteers for Salesforce (V4S) open source products!

PMM and V4S users have asked for guidance and a recipe guide to help connecting these two open source app's where and when you use these products and are interesting in crafting

Information

Github repo can be found here <https://github.com/SFDO-Community>

Important: If you have specific asks to help move this project forward we would recommend that you list them here, but also create separate Issues for each and add the label of "help wanted". This is a well-worn best practice for projects living in GitHub.
